

Plantable Pot Roses

Please Note: Your rose is in a plantable biodegradable pot.

Step 1:

Dig a hole 12 to 18 inches deep and wide enough to easily accommodate the pot. Loosen the soil in the bottom of the hole.

1/3 Rose Planting Mix

Step 2:

Mix the soil you have removed with Nurseryman's organic Rose Planting Mix. Use one part planting mix to two parts soil. Fill the hole two-thirds full of the soil/planting mix.

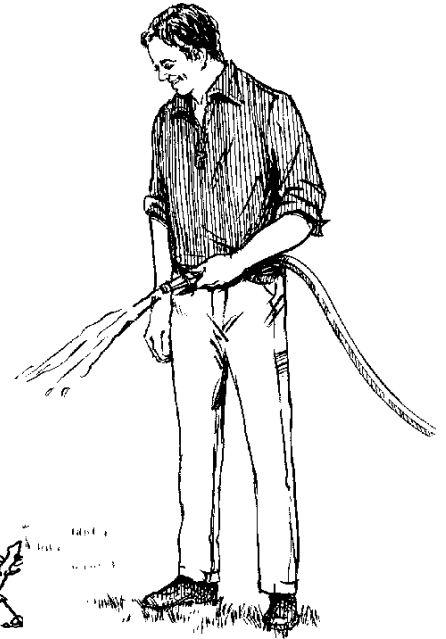

2/3 Soil

Step 3:

Set the pot in the hole so the bottom of the bud union is level with the soil. Then cover with 1-2 inches of mulch if you live in a cold climate. Fill the remainder of the hole with soil and WATER WELL with Fertilome Root Stimulator or a Vitamin B-1 solution.

Step 4:

Mound mulch, such as straw, pine needles or oak leaves over the plant to a height enough to cover the canes. Water the mound slowly and thoroughly. When the buds swell in late spring, it is time to remove the mulch and uncover the plants. If any part of the plantable pot is visible by mid-summer, just pull it off.

Step 5:

Once your plant is well established and begins to bloom, we suggest feeding with Guard & Grow every 4-6 weeks to provide the right nutrients to produce green leaves and essential new growth on which new blooms develop. Guard & Grow also protects against pests.
